Education

Stevens Institute of Technology

Sept 2021 – May 2025

Bachelor of Science in Computer Science, Minor in Finance

Hoboken, NJ

- **GPA:** 3.7/4.0
- **Relevant Coursework:** Data Structures, Algorithms, Object-Oriented Development, Agile Methods, SQL Databases, Mobile Systems and Applications, Intro to Quantitative Finance, Financial Accounting, Corporate Finance, Intro to Derivatives
- **Academic Honors:** Dean's List (All Semesters), Upsilon Pi Epsilon (Computer Science Honor Society)

Skills

Languages: Python, Solidity, Java, Javascript, C/C++ , SQL, OCaml

Tools and Frameworks: Git, Unix, AWS, React, React Native, Jupyter Notebook, PostgreSQL, Django, Truffle, Ganache, Web3.js, PyTorch, TensorFlow, OpenAI, Atlassian, Docker, RemixIDE

Work Experience

Software Development Intern

May 2024 – Aug 2024

Netki

Remote

- Developed an Ethereum smart contract in Solidity for DeFi token verification, ensuring compliance with KYC regulations and verifying the authenticity of digital assets using Truffle and Ganache for local blockchain simulation and development.
- Refactored smart contract logic to reduce gas costs by 50%, optimizing event emissions, algorithm logic, and storage patterns using best practices in Solidity.
- Implemented full test coverage with Truffle tests (Mocha/Chai) and integrated automated verification workflows to ensure robustness and compliance.
- Designed and documented system architecture for open-source release, facilitating easy integration into client contracts and compliance pipelines.

Research Assistant

Jan 2023 – May 2023

Stevens Institute for Artificial Intelligence

Hoboken, NJ

- Built Python-based prototypes in Jupyter Notebooks to explore NLP and Generative AI use cases as part of an NSF-funded research collaboration with Columbia and Syracuse.
- Utilized OpenAI GPT-4 (beta) to generate headlines from image datasets using vector embeddings, similarity metrics, and clustering algorithms.
- Leveraged PyTorch to fine-tune models and develop interactive tools for computational journalism applications.

Financial Planning and Data Analysis Intern

May 2022 – Aug 2022

ProSmile Dental Support Organization

Toms River, NJ

- Analyzed company spending of over 100 unique vendors through over 50 different dental health practices.
- Categorized the vendors and consolidated funds over a 15 month period.
- Created a plan to reduce spending by 20% and consolidate vendors for merging practices.
- Negotiated with large vendors for reduced pricing of wholesale goods.

Projects

Portfolio Website

Mar 2025 - Present

- Built and deployed a personal portfolio website using React and NextJS; implemented dynamic project routing, responsive UI with TailwindCSS, and hosting via Vercel.

Presurgical Epilepsy Evaluation Platform Project

Jan 2024 - May 2024

- Worked in an Agile team to develop application to visualize and predict seizures using source localization and PyTorch ML models. Integrated React frontend with Flask backend via REST APIs and managed brain scan datasets in PandaDB. Handled model preprocessing, and real-time visualization with Jupyter Notebook.
