Education

Stevens Institute of Technology

Sept 2021 – May 2025

Bachelor of Science in Computer Science, Minor in Finance

Hoboken, NJ

- GPA: 3.7/4.0 | *Magna Cum Laude*
- Relevant Coursework: Data Structures, Algorithms, Object-Oriented Development, Agile Methods, SQL Databases, Mobile Systems and Applications, Intro to Quantitative Finance, Financial Accounting, Corporate Finance, Intro to Derivatives
- Academic Honors: Dean's List (All Semesters), Upsilon Pi Epsilon (Computer Science Honor Society)

Skills

Languages: Python, Solidity, Java, Javascript, TypeScript, C/C++, SQL, OCaml

Tools and Frameworks: Git, Unix, AWS, React, React Native, Jupyter Notebook, PostgreSQL, Django, Truffle, Ganache, Web3.js, PyTorch, TensorFlow, OpenAI, Atlassian, Docker, RemixIDE, FastAPI, Playwright

Work Experience

Software Development Intern

May 2024 – Aug 2024

Netki

Remote

- Developed Ethereum smart contract (Solidity) for DeFi token verification, ensuring KYC compliance for digital assets using Truffle and Ganache for local blockchain simulation and development.
- Refactored smart contract logic to reduce gas costs by 50%, optimizing event emissions, algorithm logic, and storage patterns using best practices in Solidity.
- Built automated testing with Mocha/Chai, increasing code reliability and easing integration into client contracts.
- Designed and documented system architecture for open source release, improving adoption and developer onboarding.

Research Assistant

Jan 2023 – May 2023

Stevens Institute for Artificial Intelligence

Hoboken, NJ

- Built Python-based prototypes in Jupyter Notebooks to explore NLP and Generative AI use cases as part of an NSF-funded research collaboration with Columbia and Syracuse.
- Utilized OpenAI GPT-4 (beta) to generate headlines from image datasets using vector embeddings, similarity metrics, and clustering algorithms.
- Leveraged PyTorch to fine-tune models and develop interactive tools for computational journalism applications.

Financial Planning and Data Analysis Intern

May 2022 – Aug 2022

ProSmile Dental Support Organization

Toms River, NJ

- Analyzed company spending of over 100 unique vendors through over 50 different dental health practices.
- Categorized the vendors and consolidated funds over a 15 month period.
- Created a plan to reduce spending by 20% and consolidate vendors for merging practices.
- Negotiated with large vendors for reduced pricing of wholesale goods.

Projects

NBA ReDrafter *redraft-room.onrender.com*

2025 – Present

- Built and deployed a full-stack NBA draft visualization tool using React 19, TypeScript, FastAPI, and PostgreSQL; supports drag-and-drop redrafting, shareable links, and screenshot export via Playwright headless browser automation.
- Engineered a Python data pipeline to scrape, merge, and ingest historical NBA draft data into PostgreSQL, covering 22 draft classes (2003–2025) and 1,500+ players.
- Architected a REST API with FastAPI exposing endpoints for draft data retrieval, NBA headshot proxying, and token-based temporary print-data storage.

Portfolio Website

Mar 2025 – Present

- Built and deployed a personal portfolio website using React and NextJS; implemented dynamic project routing, responsive UI with TailwindCSS, and hosting via Vercel.

Presurgical Epilepsy Evaluation Platform

Jan 2024 – May 2024

- Built seizure prediction app (React, Flask, PyTorch, REST API, PandaDB) integrating real-time brain scan visualization; streamlined preprocessing workflow, reducing analysis time by 20%.
